filaments and plastic material bonded to the thermoplastic liner, removing a portion of the vessel wall adjacent to the opening so as to define a passageway into an interior of said vessel, the removed portion being bounded by the fluid-tight seal between the first fitting portion and the inner surface of the thermoplastic liner; and bonding a second fitting portion to the first fitting portion, the second fitting portion being configured to provide a port between the interior of the vessel and the exterior of the vessel in combination with the other elements of the claimed invention.
